Selected Projects

enDAOment, a voting dApp
Conceptual Case Study
Delivered design concept that allows the average person to participate in decentralized autonomous organization (DAO) voting. Conducted research on how DAO proposals work and how to integrate blockchain technologies into everyday life.

myGNV, a social service eligibility wizard
Redesign for the City of Gainesville
Led wireframing and rapid prototyping to build an online wizard that informs users what local social services they are eligible for. Conducted research and interviews and created mockups for a team of engineers. Presented project to the city of Gainesville as a team.

silhouette, a fashion app concept
Conceptual Case Study
Designed, prototyped, and user-tested a mobile app that identifies articles of clothing seen on screen. Carried out user research through targeted interviews and extensive usability testing before and after redesign.

Education

Bachelor of Science in Computer Engineering
Minor in Digital Arts and Sciences
University of Florida

Completed 100+ credits of coursework from 2017-21 and took an academic leave.

Relevant Coursework: User Experience Design, Human-Computer Interaction, Applied Digital Media Protocols, Wearable and Mobile App Development, Engineering Entrepreneurship

Work Experience

AV Technician @ University of Florida
Sept 2019 – Sept 2021
Provided technical support for events, presentations, seminars, and hearings to the university. Engineered and executed lighting and sound scripts for performances and special events.

Skills	Design	Programming	Tools
	Wireframing	Solidity	Figma
	Prototyping	C++	Sketch
	Sketching	Java	Adobe XD
	Graphic Design	React	Photoshop
	Interaction Design	HTML/CSS	Smart Contracts
	Game Design	JavaScript	Android Studio
